"Subjective Question-Answer"

By: Payal Sharma

Q1: Which are the top three variables in your model which contribute most towards the probability of a lead getting convert?

Answer: a) Total time spent on website (positive contribution)

b) Lead Source_Reference (positive contribution)

c) What is your current occupation_student? (negative contribution)

Q2: What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

Answer: i) Lead source with elements google

ii) Lead source with elements direct traffic

iii) Lead source with elements direct traffic organic search

Q3: X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Answer: **a)** Target leads that spend a lot of time on X-Education site (Total Time Spent on Website)
b). Target leads who return to the site (Page Views Per Visit). However, they may be returning to compare courses from other sites, as evidenced by the high number of visits. As a result, interns should be more proactive and ensure that

competitive points where X-Education is superior are stringently highlighted.

C). Target leads that have come through References as they have a higher probability of converting.

d.) Students can be contacted, but owing to the course's industrial focus, they have a decreased likelihood of converting. However, this might be a motivating element to guarantee that they are industry ready by the time they finish the school.

Q4: Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Answer: a) Do not focus on unemployed leads. They might not have a budget to spend on the course.

b) They need to focus more on other methods like automated emails and SMS. This way calling wouldn't be required unless it is an emergency. The above strategy could be used with the customers who have high chances of buying the course.
